Built-in 10 Year Lithium Battery Alarm with Wireless RF Interlink

PSA is proud to introduce the latest in the Lifesaver 6000 series, model 6000DCW Smoke Alarm. The Lifesaver 6000DCW is powered by fixed 10 year lithium batteries and features an in-built wireless RF interlink. It is designed to be wirelessly interlinked with other 6000DCW and with Lifesaver 6000 series mains powered smoke alarms fitted with a 6000WB wireless base.

The Lifesaver 6000DCW smoke alarm uses photoelectric technology and can be used as a single standalone unit, or be interconnected with up to 24 units to create a complete network of fire protection system.

The new 6000DCW smoke alarm is designed to perform in challenging environments by incorporating these key features.

New Sensor Interference Technology
Smoke detector sensor programmed to activate only after 5 positive detection readings. This filtering technology will reduce false alarm activations caused by dust, insects and external factors.

Coating
The electronics of the smoke alarm circuit board is coated with a special resin that protects from moisture and condensation that may occur in humid conditions.

New Design
Two-piece structure design with small streamline air-flow gaps into the detection sensor. New separation cover plate to minimise condensation inside the smoke alarm.

Easy Power ON / Power OFF
Power on when mounting onto the base and power off when removed from the mounting base. Simple and easy.
Anti-static Chamber
A conductive smoke detection chamber to repel dust away and prevent particles from adhering inside the sensor chamber such as plasterboard dust.

Monitored Wireless Network
The wireless interlink network is fully supervised and monitored at all times. The smart network communicates to each device and monitors its wireless performance and status of the smoke alarms. If any device disconnects from the network, the device warns of any dropouts. The wireless network is protected with cyber security to prevent any interference from other wireless signals commonly found in residential settings. Secured using 918Mhz frequency. Complies to AS/NZS 4268 standard radio equipment and systems.

Manufacturing
Proudly designed in Australia, and made by one of the world's leading manufacturer of smoke alarms. The Lifesaver 6000 series is manufactured in a state-of-the-art quality certified factory.

Two 10 Year Lithium Batteries
Peace of mind for the life of the smoke alarm. Fitted with reliable and quality Panasonic® lithium batteries. One battery to power the operation & function of the smoke alarm and a second battery to power the wireless monitored interlink connection between smoke alarms. For the life of the product.

Photoelectric Technology
To detect a wide range of fires particularly to slow smouldering fires and does not contain any radio-active material.

Single Button Operation
Easy to operate single button on the smoke alarm. Simple user operation. Press once to locate and identify the initiating smoke alarm within a network and press again to hush or silence all the smoke alarms.

Bug Screen Protection
Smallest 0.8mm diameter bug screen over the sensor chamber to minimise insect ingress and reduce false alarms.

Low Battery Hush Feature
If the smoke alarm is in low battery mode, pressing the button will hush the beeping for 8 hours giving users time to attend to the smoke alarm. A handy feature to silence beeping that occurs in the middle of the night.

10 Year Warranty
Peace of mind for the lifetime of the product. The warranty covers any manufacturing defects of the product and the battery.

Smoke Alarm Control
The 6000DCW is compatible with the smoke alarm controller model 6000THL. Added convenience of Test, Hush, Locate from a wireless remote control.

Certified
The complete 6000 series range is proudly manufactured by a Quality Certified factory. And the 6000DCW is tested and approved to AS3786:2014 standard, certified by CSIRO Activfire and SAI Global certified product.
